

WALLET

Fingerprint enabled Cryptocurrency Wallet

Fingerprint Cold Wallet

Standalone mode for total asset query and QR code

BLE mode for iOS and Android app

USB mode for Windows/Mac/Browsers

User Guide Rev: 1.8

20 August 2020

Designed with EAL 5+ SE (Infineon SLE97) to secure Private key and algorithm

Support standalone mode, to work with Mobile app via BLE and PC via USB

Multiple wallets supported; Multiple cryptocurrencies supported; Capable to add new currencies

Fingerprint matching to access Wallet and transactions; not unsecure PIN code anymore

Build-in E-Ink to display indicators, text and QR code, multiple languages enabled

Fully compliance with BIP32, BIP39 and BIP44; support multi-lingual mnemonic by BIP39

**We believe in a brave new world,
where you are the key to
everything.**

”

Make your Wallet Secure.
Patented Standalone Mode.
USB + BLE dual interface.
Multiple Wallets and Cryptocurrencies.

Congratulations! You've got your AT.Wallet. Your AT.Wallet will be ready to use in a few moments. Thank you and enjoy!

- 1) Open up the box and get comfortable with the hardware.
- 2) Check your box contents.
 - 1 Hardware Wallet
 - 1 USB Cable
 - 2 Recovery Sheets
 - 1 USB Docking

Setting up

Standalone mode

Single-click - Toggle to The Next Page

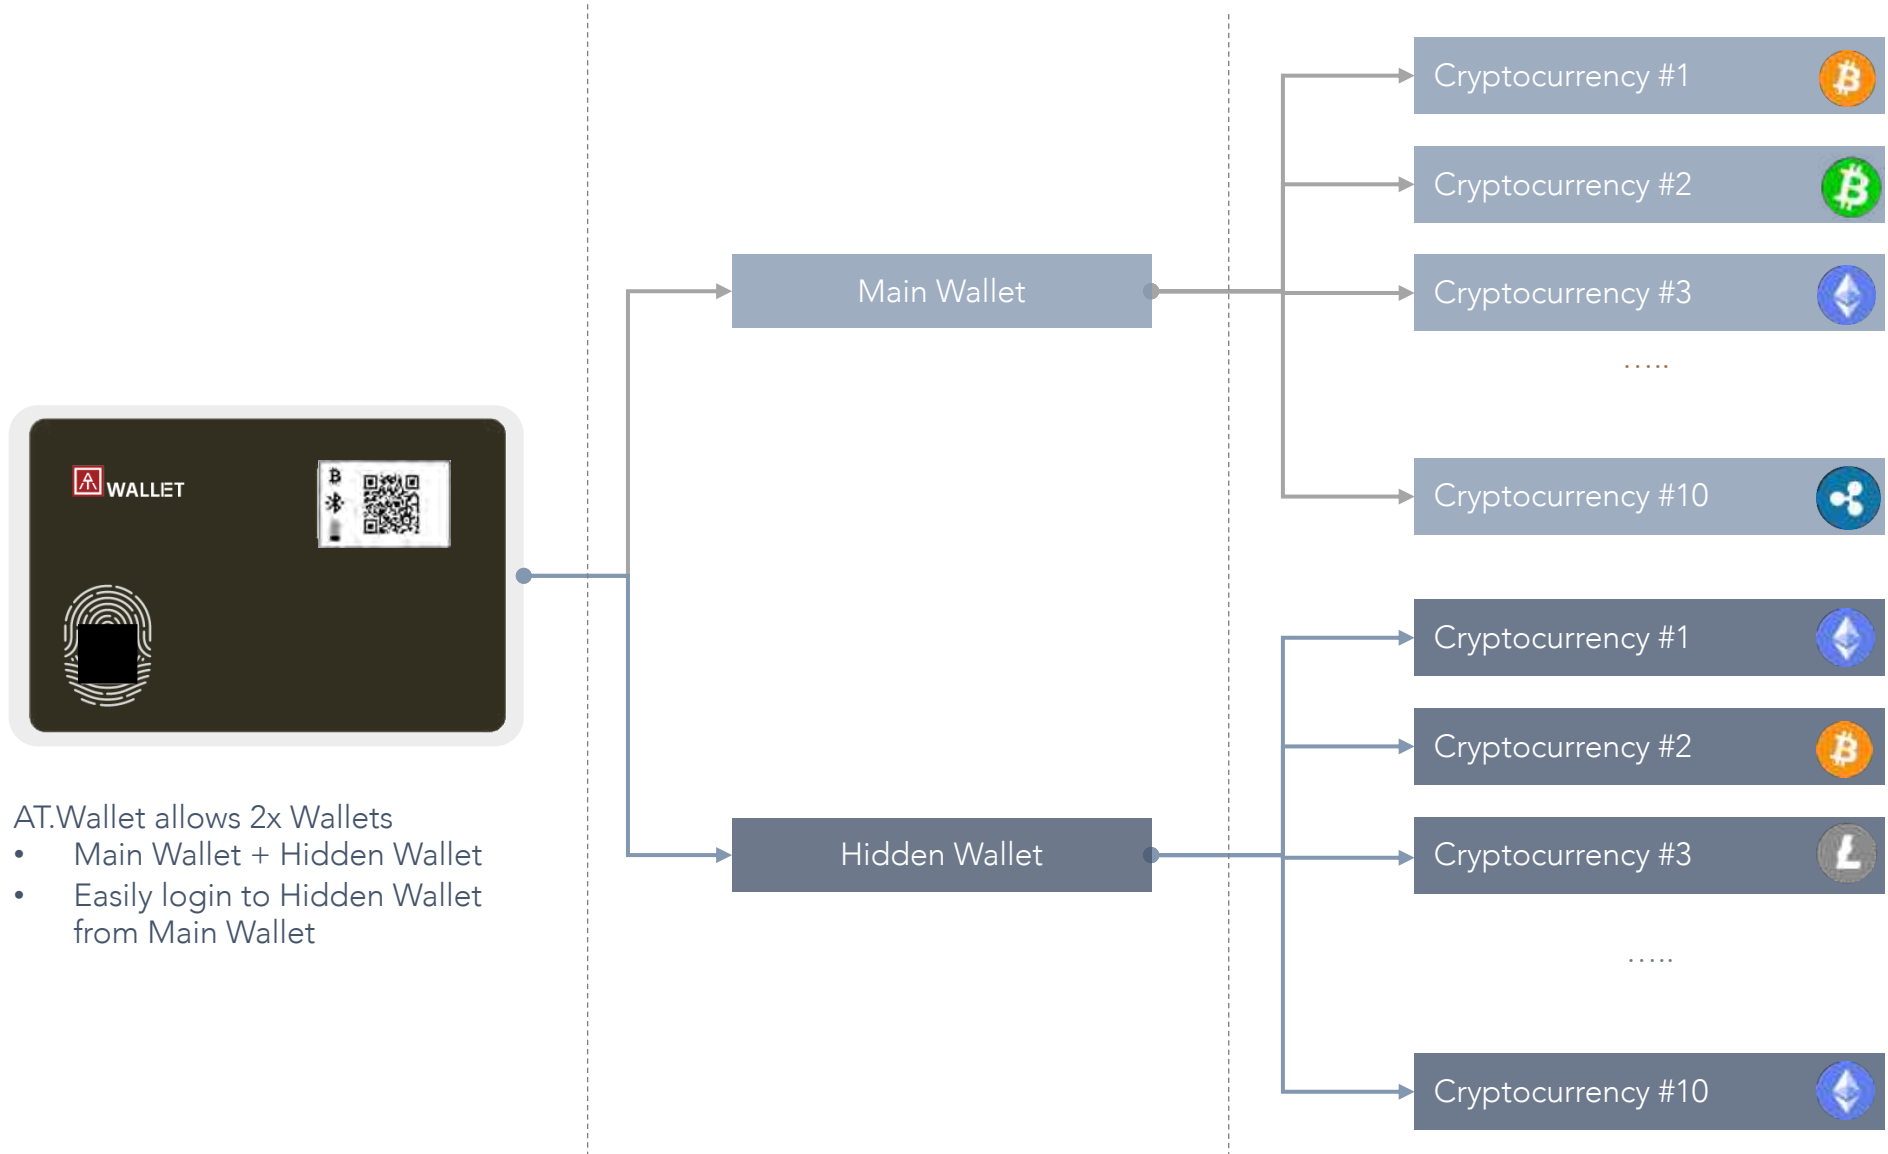

- Power ON
- Verify Fingerprint
- Loading → Main Wallet
- 1st Cryptocurrency Summary
- 1st Cryptocurrency QR Code
- 1st Cryptocurrency Address
- 2nd Cryptocurrency Summary

...

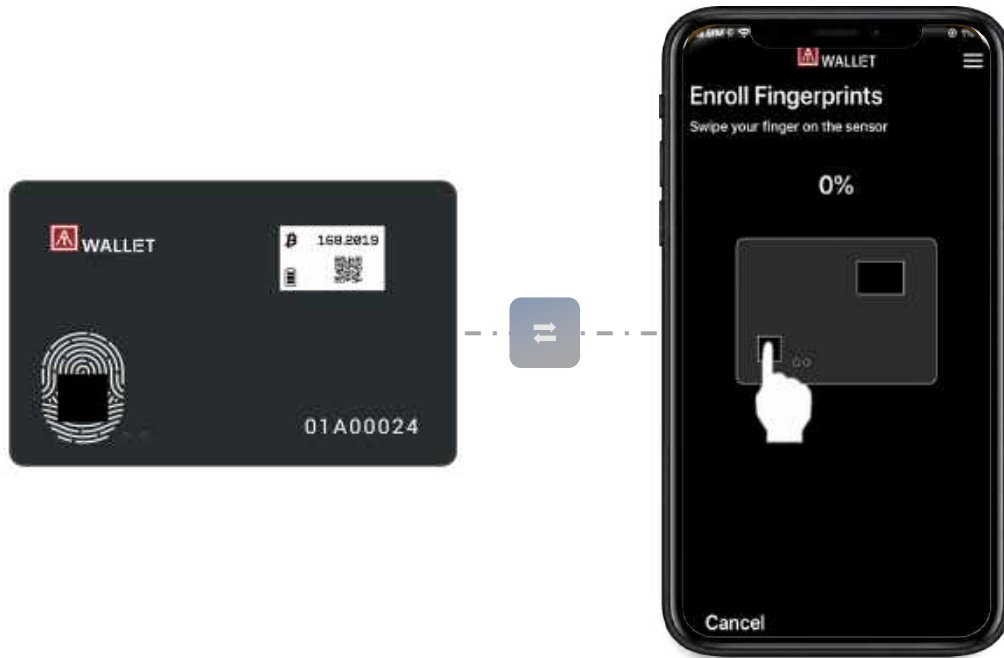

BLE Mode Power-Saving Policy:

- When AT.Wallet card connects with host app (BLE mode) and there are no operations (app and card) for 60 sec., BLE will disconnect (avoid battery consuming continuously) and the app will remind you about "Session Expired".
- If AT.Wallet card has no BLE or USB connection, it will power off automatically after 120 sec. without any operations to avoid battery consumption.
- Please "Log out" from App and click a specific wallet card to log in again by fingerprint.

1x AT.Wallet card → 2x Wallet(s) per card → 10x Cryptocurrencies per wallet

- AT.Wallet allows 2x Wallets
- Main Wallet + Hidden Wallet
 - Easily login to Hidden Wallet from Main Wallet

NOTE:

- If AT.Wallet connects to USB port but nothing happens (no LED ON), please wait for a while since there is the protect circuit to make sure the battery voltage is not lower than 3.0V.
- USB port of PC: USB mode- AT.Wallet can work as USB Wallet with Windows and Mac app
- USB power adaptor: BLE mode- AT.Wallet can work as BLE Wallet with iOS, Android, Windows and Mac app

Charge your AT.Wallet before the first use.

- 1) Insert your card into the docking to connect to USB port or any USB adaptor.
- 2) Download The App- AT.Wallet App

- Mobile

AT.Wallet App

- Desktop

<https://apps.apple.com/us/app/at-wallet/id1490097962?mt=12>

Or search "AT.Wallet"

A. Insert Your Wallet into Docking: YouTube - <https://youtu.be/mSfReGrRFWg>

B. Connect to PC 

→ USB icon will appear

→ LED#2 will be yellow flashing (charging process begins)

BLE (Bluetooth Low Energy)

Pair and connect via BLE: Working with the mobile app and the Windows/Mac app.

USB

Stay on Docking via USB to connect with PC by Windows/Mac app.

Standalone mode

Standalone mode to check amount and receive transaction via QR code.

More cryptocurrencies will be soon supported ...

Transaction Records

Transaction Details

BIP44 refers to the accepted common standard to derive non Segwit addresses. These addresses always begin with a 1. (default of AT.Wallet)

BIP84 refers to the accepted common standard of deriving native segwit addresses. These addresses always begin with bc1 - and are referred to bech32 addresses.

- You can switch to BIP84 when you are adding new cryptocurrency (Bitcoin or LiteCoin only) as below.

What's Segwit?
[Learn more details!](#)

For others to send coins to you

Select your choice and click "Receive" button.

Showing QR code and address.

select the address and present QR code for scan or copy the address to share manually.

5. Transaction(s) or Settings

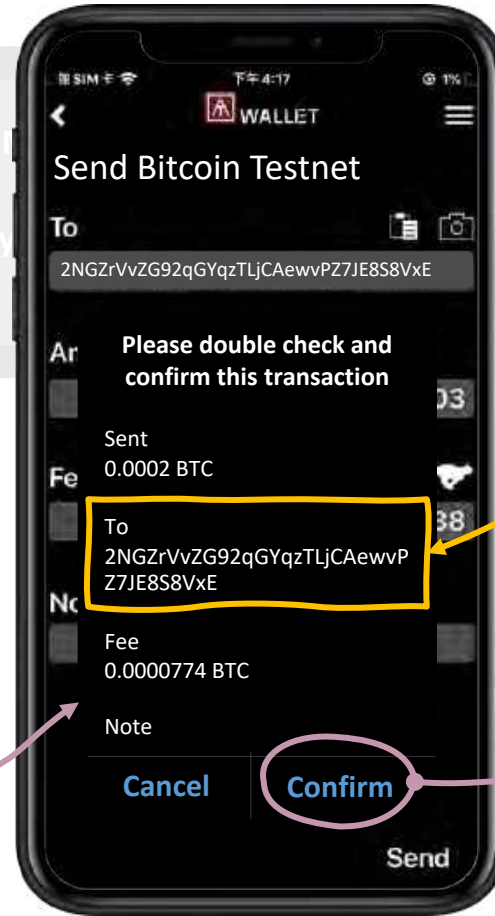

* Fingerprint verification is NOT necessary for receiving payments.

Send coins to others simply

Filling in the "To" line with the address or press the icon to scan receiver's QR code.

Check the sending details on the app, as well as your card. Make sure the amount on both screens is correct.

5. Transaction(s) or Settings

Verify by bound fingerprint(s) or verify by any enrolled fingerprint if there is no binding.

1x AT.Wallet card

→ 2x Wallet(s) per card

→ 10x Cryptocurrencies per wallet

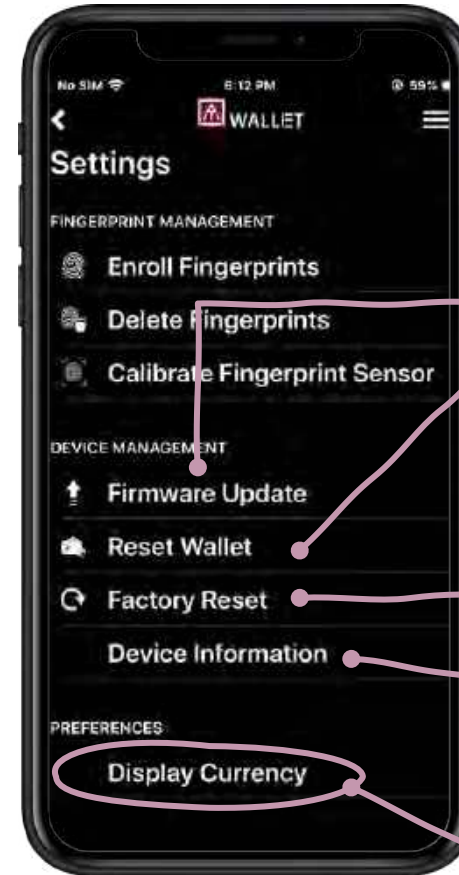

- AT.Wallet allows 2x Wallets
- Main Wallet + Hidden Wallet
 - Easily login to Hidden Wallet from Main Wallet

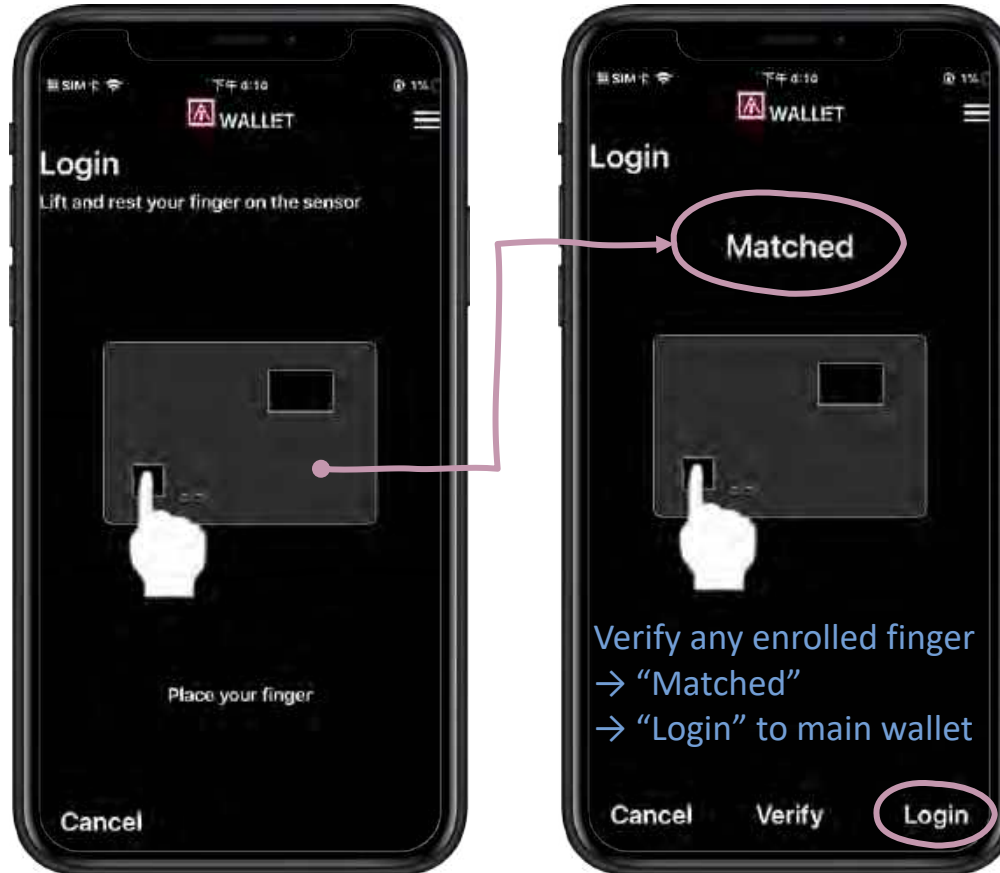

- Up to 8x fingers
- The fingerprint can't be deleted only if it's bound with assigned wallet.
- If there is something wrong with your fingerprint sensor, re-calibrate sensor to work (Please do not touch fingerprint sensor during calibration!)

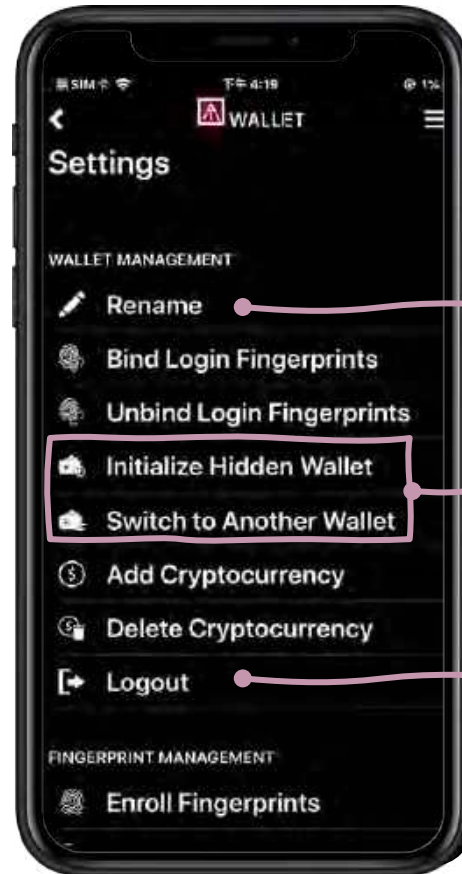

- Check and upgrade firmware automatically.
- If you lose your wallets, you can recover it and enrolled fingerprints will still be there.
- Erase all data.
- AT.Wallet card ID, Firmware version, battery status.
- Select currency.

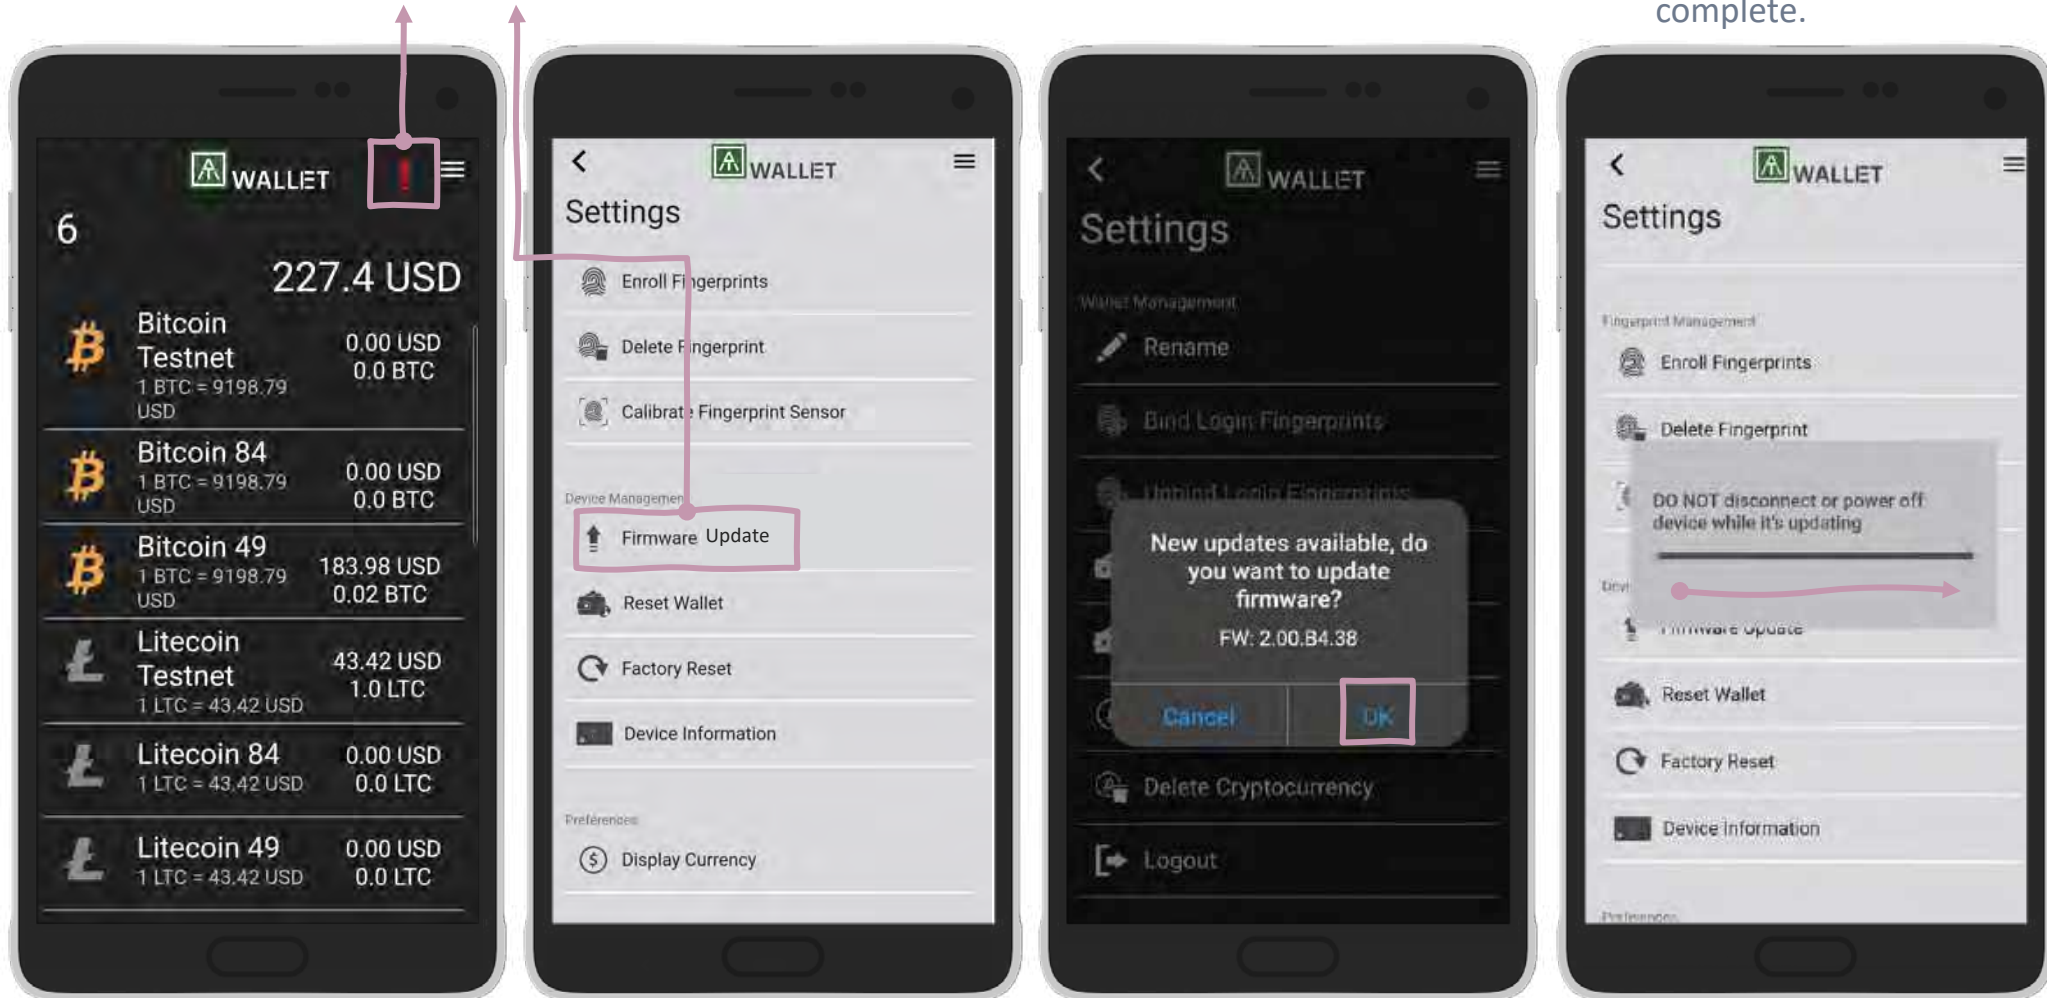

- If there is no any fingerprint bound with specific wallet:
 - 1) Login to main wallet via any enrolled fingerprint.
 - 2) Switch to hidden wallet from main wallet.
 - 3) Standalone mode is only for main wallet.

- Rename wallet (main or hidden wallet) or Cryptocurrency.
- Initiate and Login to hidden wallet from "Switch to Another Wallet".
- Logout from AT.Wallet, BLE disconnected; If your wallet card is power off, please logout from here and re-login.

- Firmware Update

- The power cannot be turned off until the software update is complete.

BLE Pairing

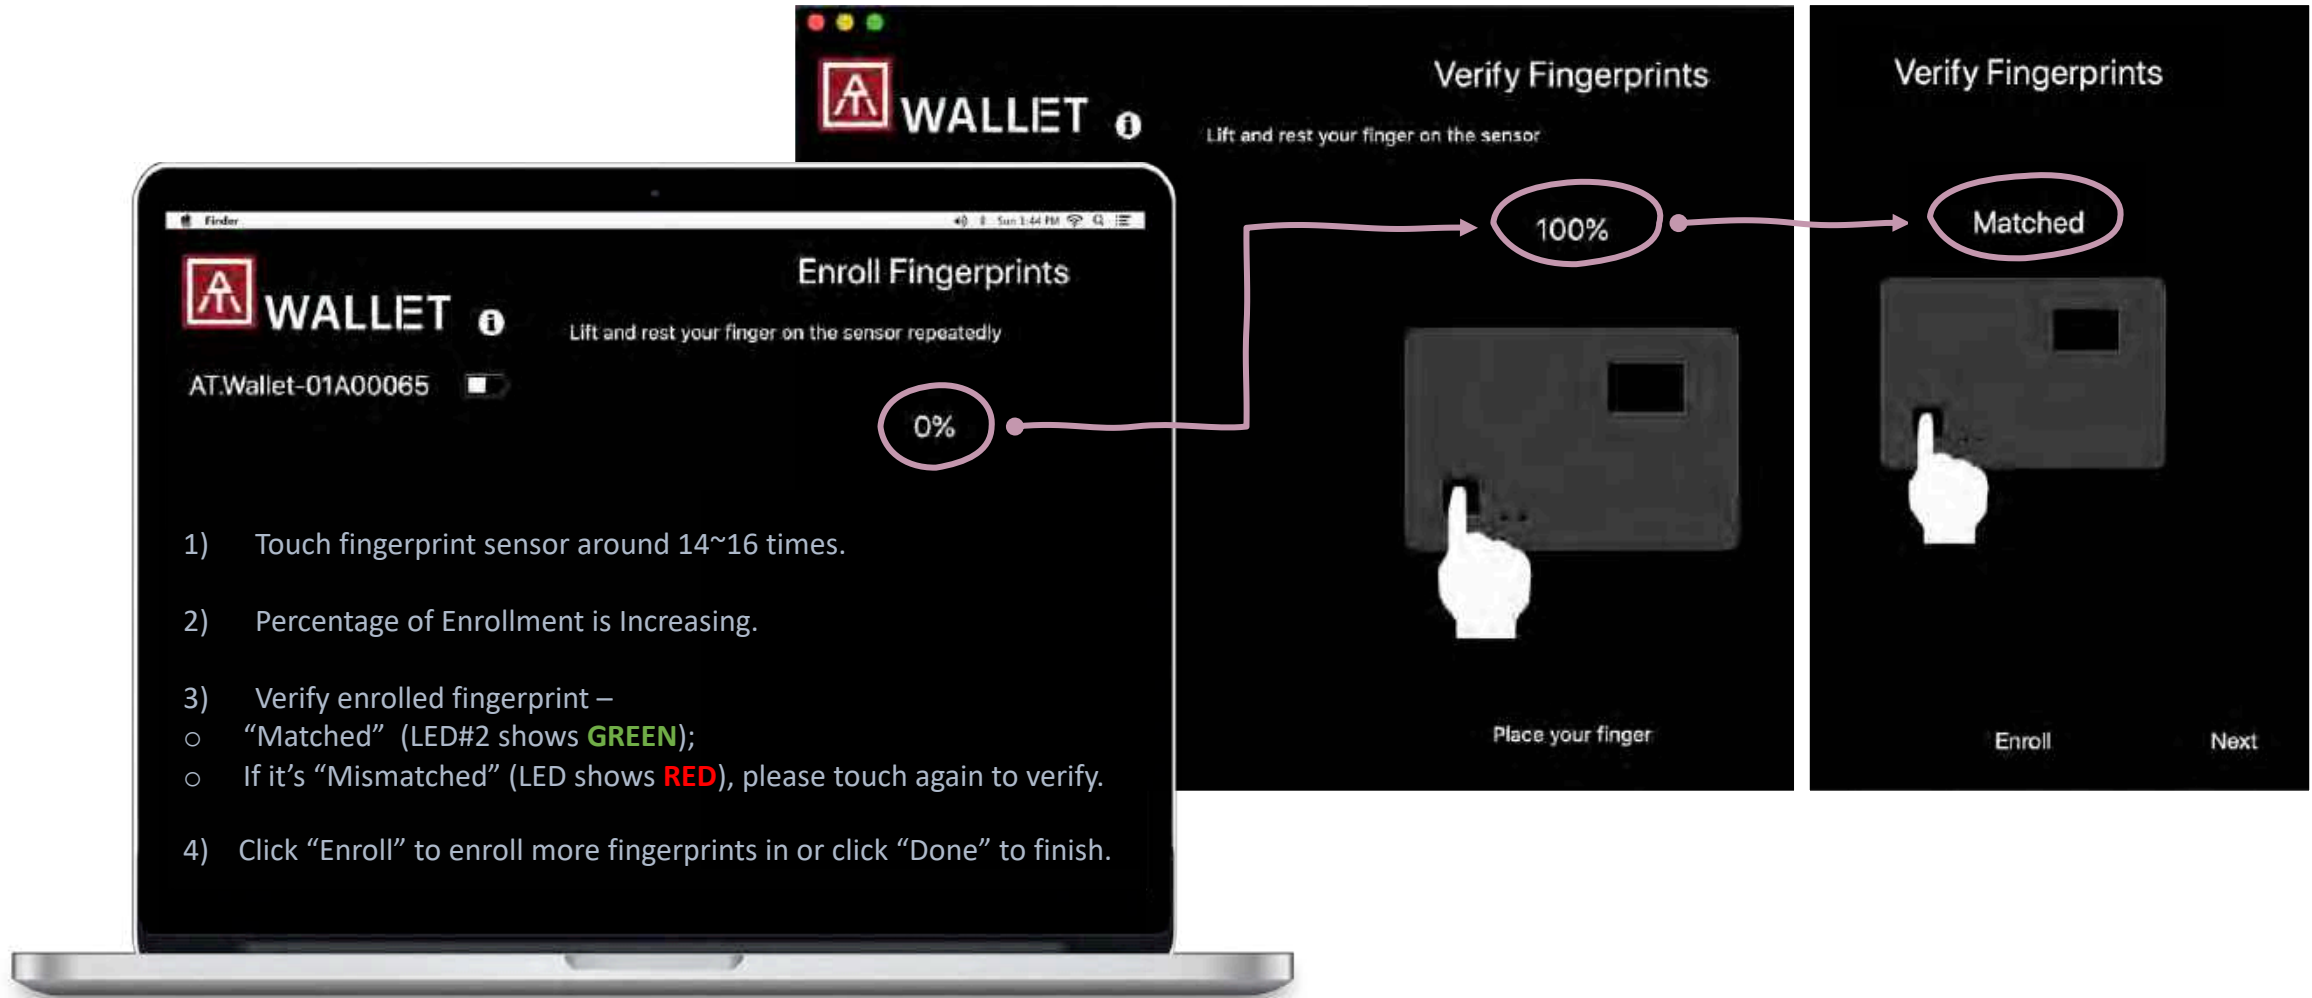

USB Connecting

- 1) Launch AT.Wallet app and turn Bluetooth ON.
- 2) Power on your AT.Wallet.
- 3) Identify your card by Keyword.
- 4) LED#2 is white flashing - Touch fingerprint sensor to confirm pairing.
- 5) "Connect".

- 1) Launch AT.Wallet app.
- 2) Connect card to your PC via USB, you card will power on automatically
- 3) Connected AT.Wallet cards will be shown on the list .

The image illustrates the fingerprint enrollment process. On the left, a laptop screen displays the 'Enroll Fingerprints' screen with a progress indicator at 0%. Below the screen, a list of instructions is provided. On the right, two tablet screens show the 'Verify Fingerprints' process. The first tablet screen shows a progress indicator at 100% and a hand placing a finger on the sensor. The second tablet screen shows a progress indicator at 'Matched' and a hand resting on the sensor. Arrows connect the 0% indicator on the laptop to the 100% indicator on the first tablet, and from the 100% indicator to the 'Matched' indicator on the second tablet.
